

Wayne Dalton / DuraMaster Field Progress Report

Dublin, California · Customer and exact-location details removed

This report condenses the clear, non-duplicate CompanyCam footage into a customer-safe record of the visible procedure. It documents the existing hardware, access and removal work, spring-system installation, alignment checks, and final operation without publishing private project information.

Existing system documented

The existing track, upper fixture, and operating clearances were recorded before the work sequence.

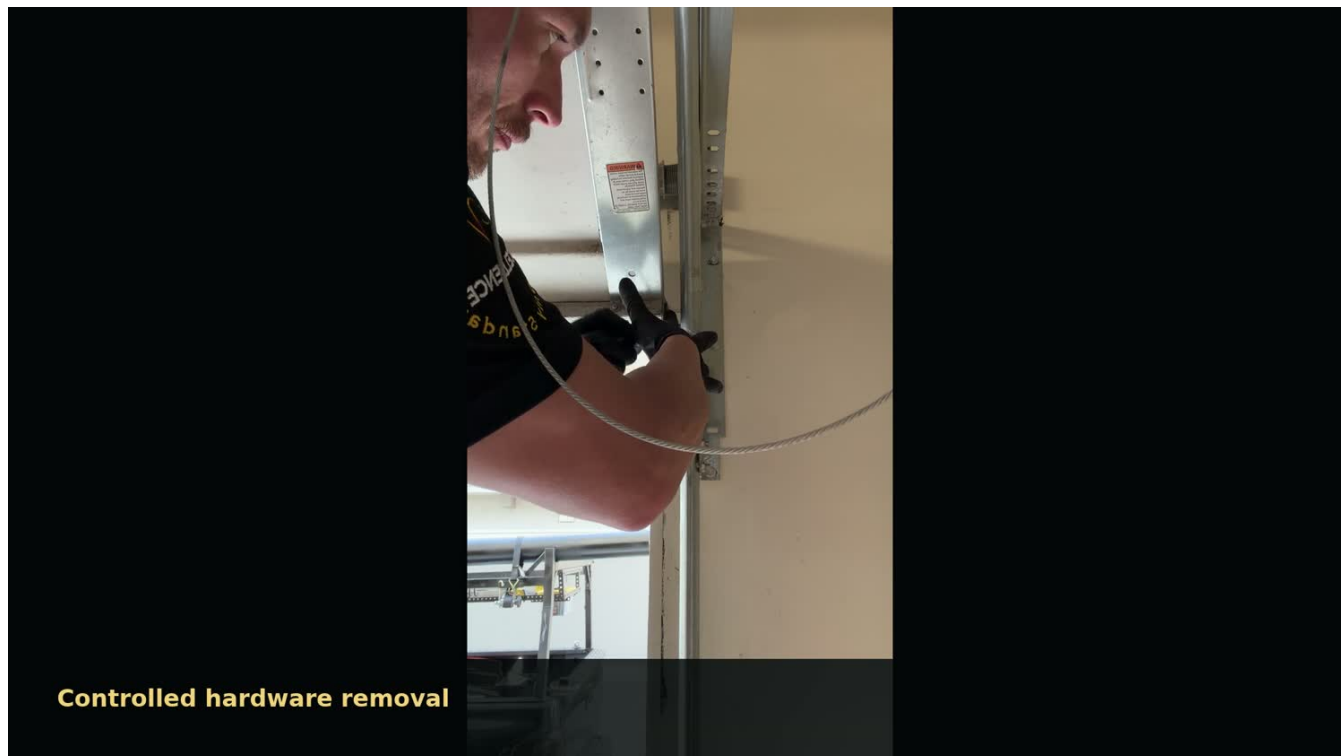

Existing track and top fixture

Visible-condition note: this page describes only what is shown in the selected field footage. It does not publish a customer name, address, coordinates, private notes, or technician name.

Hardware removal and access

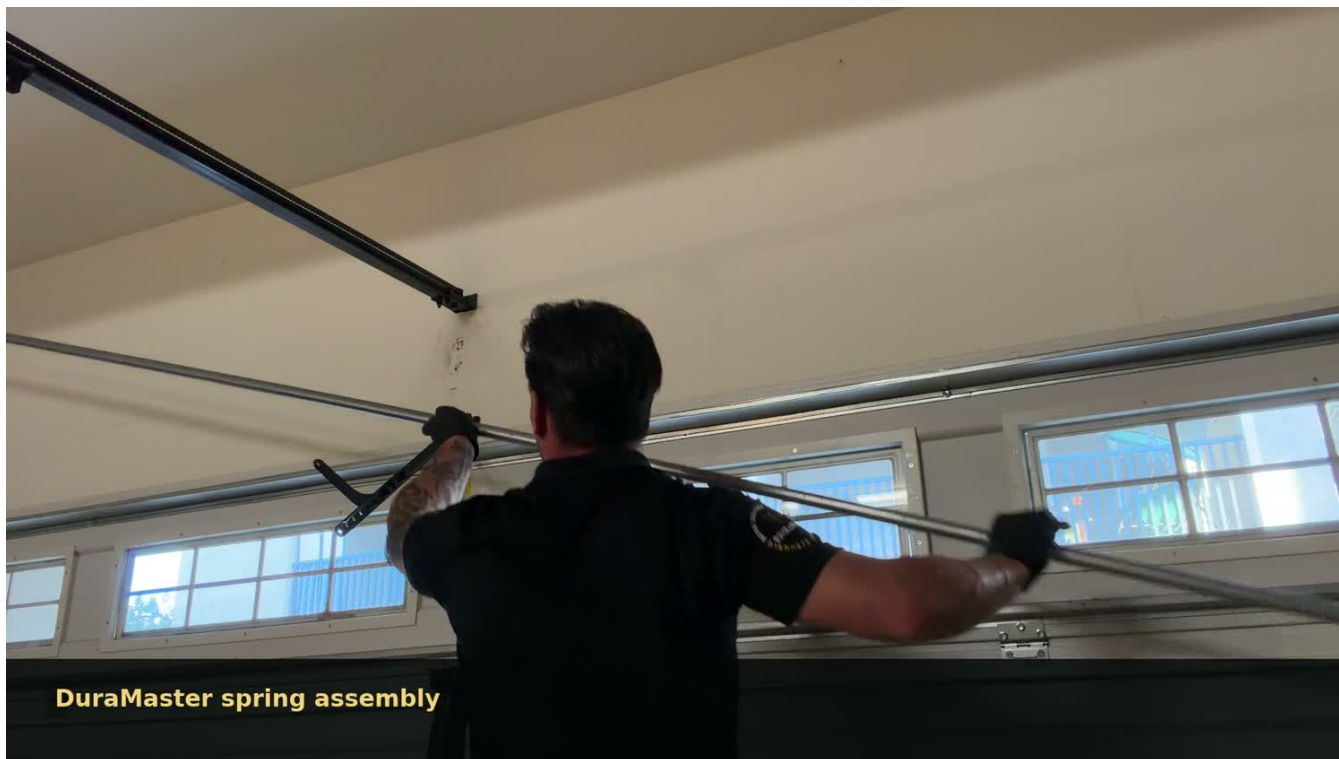

The edit shows controlled removal and access around the side and upper door hardware.

Visible-condition note: this page describes only what is shown in the selected field footage. It does not publish a customer name, address, coordinates, private notes, or technician name.

DuraMaster spring assembly

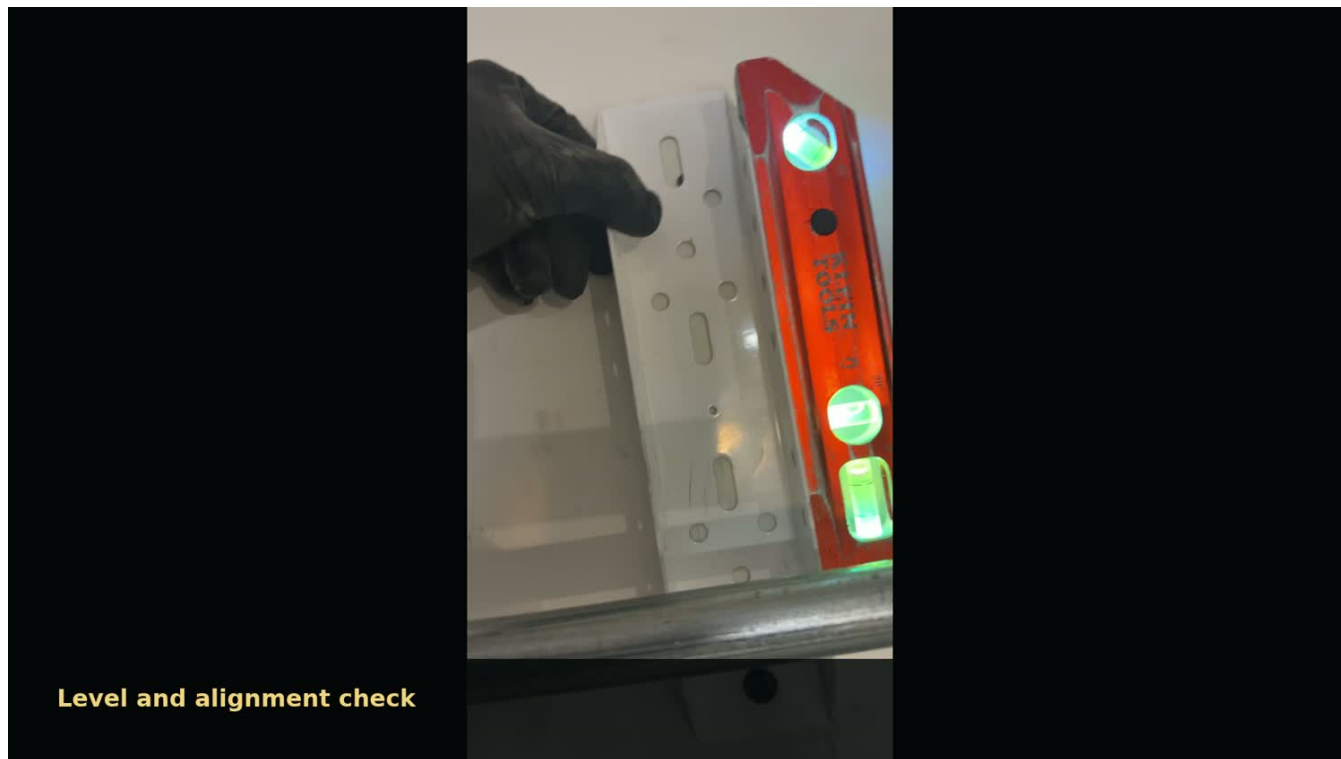

The new spring and shaft components are shown during installation and positioning.

Visible-condition note: this page describes only what is shown in the selected field footage. It does not publish a customer name, address, coordinates, private notes, or technician name.

Alignment verification

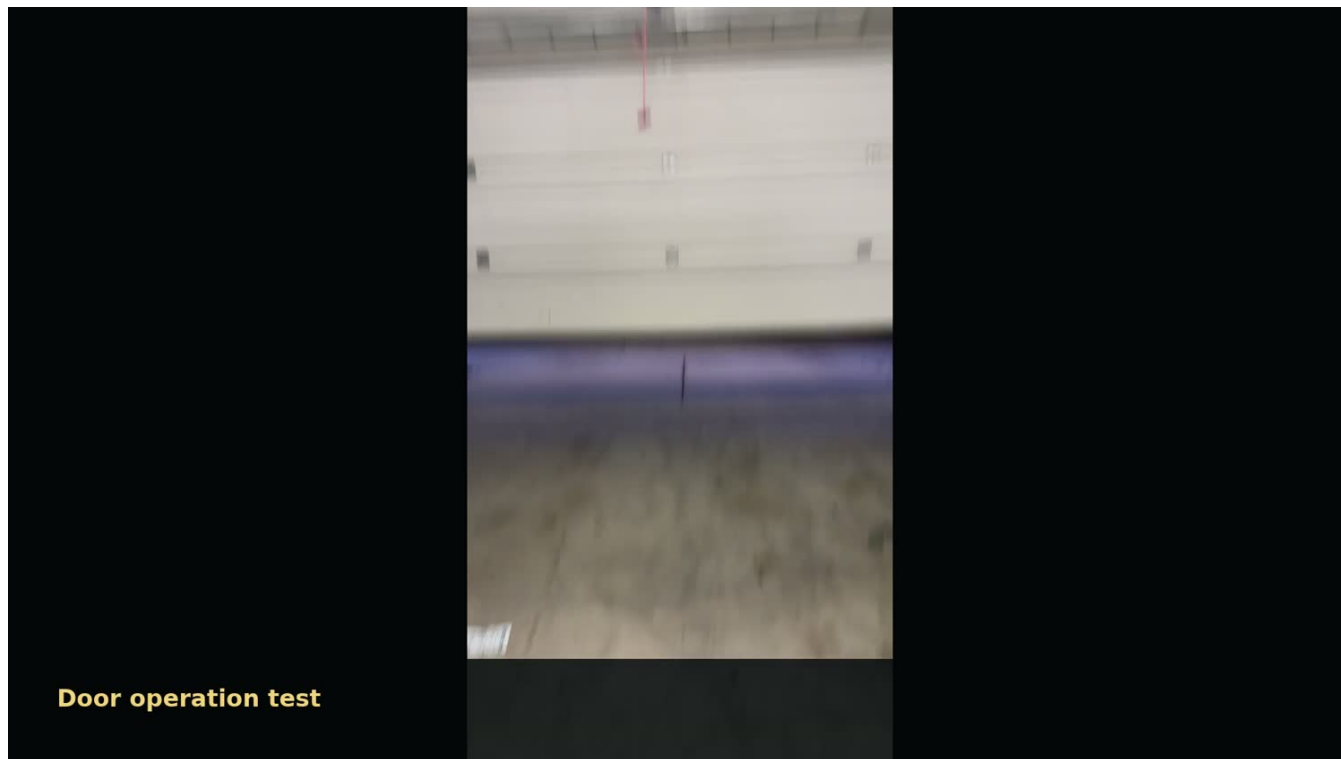

A level and close hardware views document the alignment and end-bearing area.

Visible-condition note: this page describes only what is shown in the selected field footage. It does not publish a customer name, address, coordinates, private notes, or technician name.

Operation test and final walkthrough

The completed system is shown during an operating test and final interior walkthrough.

Visible-condition note: this page describes only what is shown in the selected field footage. It does not publish a customer name, address, coordinates, private notes, or technician name.
